

Meet Max

The good kind of overhead

unios.

Big on wellness. Low on
overheads. Goes with the flow.
Doesn't nick your lunch.

The best workmate, really.

Comfort that's all yours.

By combining direct and indirect light, Max softens contrast to enhance visual comfort — with adjustable brightness and CCT so comfort's always yours to decide.

Personalised light

With Max, you can adjust the CCT and brightness to suit your eyes, your tasks, and your rhythm throughout the day.

Asymmetrical optics

Max uses individual lenses for precise, asymmetrical light control — delivering low glare and 0.7 uniformity when paired with indirect lighting.

The **good** kind
of overhead.

0 Downtime

Skip installation scheduling, Max is plug-and-play, ideal for fast-turnaround projects or spaces in transition.

\$0 Electrical Installation

No ceiling cuts. No wiring. No hassle.
Just assemble, plug it in, and get to work.

Up to 49% more cost-efficient

*In relocation scenarios – like lease endings or tenancy changes – Max is significantly more cost-efficient than linear solutions offering comparable wellness benefits, which require full reinvestment.

Set once. Sorted for all.

Max is a true team player, delivering shared comfort and collective savings. It keeps the atmosphere just right, knows when to step up, and dial things down.

Lock Mode

'Lock' the brightness and CCT of the indirect light to keep the office ambience consistent, while still giving each user control over their own direct light.

Presence & Daylight Sensor

Let Max's presence and daylight sensor figure out when to tone it down, and step it up for better energy consumption.

Max Freestanding Light

LED Power: 100W (12W ↓ / 88W ↑),
Lumens: up to 11,424lm (1,178lm ↓ / 10,246lm ↑),
