

A photograph of a modern interior space, likely a locker room or a secure storage area. The walls are curved and illuminated with a strong blue light. On the right, a wall of lockers is visible, each with a number. The numbers are arranged in a grid: 40, 43, 46, 49 in the top row; 39, 42, 45, 48 in the bottom row. The floor is a light-colored, polished surface that reflects the blue light. The overall atmosphere is futuristic and high-tech.

Eclipse Collection

unios®

Celebrating the finer details

From its conception, the Eclipse promises to be essential to Unios' linear product profile. This collection is brought to purpose to embrace the ethos that "beauty lies in the details". From the straight lines to the soft edges, the Eclipse ensures that bespoke architectural elements with exceptional quality are seen in an all-new light.

A variety of profiles

The versatile Eclipse Collection offers various profiles to cater to a range of lighting requirements and architectural intentions.

Glide Mini

Key Features

20/25mm cut increments

With great uniformity, single CCT variants of the Eclipse can be fabricated to suit any application. The EC6 strip is customisable down to 20mm increments with 300LEDs/m, while the EC10 strip features 120LEDs/m and is customisable down to 25mm increments.

RGB & RGBW Options

Explore different patterns and colours through the Eclipse. With RGB, you can produce almost any colour to create striking effects. For a truer representation of white, configure Eclipse with RGBW, which adds a white chip (on top of Red, Green and Blue).

54,000h

Tested lifetime of >54,000h at L80B10 to deliver high performance over time.

110lm/W

The efficiency of the SMD LEDs allows for outputs of up to 110lm/W.

Tunable White

Change colour temperatures with colour-tuning technology ranging from 2700K to 6500K.

Up to IP67

Glide IP67 is completely sealed for installation on facades or inground on walkways and surfaces.

CRI 90+

A CRI of 90+ and R9>50 supports applications where accurate colour representation is essential.

Up to IK10

A recessed Glide IP67 with a diffuser flush with the ground surface allows loads up to 8000kg and is IK10.

Phase-Cut

The 24V phase-cut driver allows for the dimming of our single CCT LED strip through leading/trailing edge controls.

Refer to the product summary pages for SKU compatibility.

Use the GI25T/GI40T and its cable channel feature to create a seamless line of light with ease.

Facade Illumination

Strip lighting enhances building facades through two techniques: indirect and direct illumination. Hidden strips, serving as indirect light sources, spotlight architectural elements instead of the light itself. Whether casting a soft glow around features or illuminating objects, hidden strip lighting dynamically transforms buildings at night while remaining discreet during the day.

Visible strip lighting, arranged in patterns, adds dimension to otherwise plain facades, complementing existing design features for enhanced visual appeal. For added design flexibility, consider RGB/RGBW strip lighting, enabling changeable colour patterns that adapt the building facade to seasons or align with local events.

Tip 1: Keep indirect lighting out of direct view from all observable directions, including other taller buildings. An appropriate setback keeps the light source hidden from direct view and allows the light illumination to do the real work. Consider the Dark Skies Initiatives and minimise upward light spill where possible.

Tip 2: Directly visible strip lighting used as a feature works best when the strip light is the focus of attention. Lower light output levels can achieve higher visual comfort without compromising the effect.

GI40T IP67 profile

Indirect lighting application example
GI25 IP67 profile

Pathway Illumination

Eclipse strip light can be used in parks to provide accentuation and highlight details or to provide visual wayfinding along pathways. Indirect lighting installed on the underside of park benches, planter boxes, handrails or wall capping provides ambience and floor illumination while drawing attention to these feature areas.

When combined with other fixtures, such as bollards or pole-top luminaires, strip lights play a significant role in a lighting scheme that is both functional and visually interesting. Additionally, inground Eclipse strip can draw attention to important areas or provide a guiding light along the most common paths of travel.

Tip 1: Consider using inground lighting with lower light output in open sky areas to reduce unnecessary light spilling into the night sky. Brighter outputs are better suited to areas with overhead cover or tree canopies. Inground lighting can help achieve vertical illuminance at face level when combined with handrail lighting to achieve floor levels.

Tip 2: When designing inground Eclipse, coordinate sizing and installation requirements with the paving and landscape contractors to ensure a cohesive end result. GI25/GI40 widths are fixed, but lengths can be customised to suit any paver size.

Glide IP67 Series

The Glide IP67 series is both weatherproof and trafficable. The new GI40T and GI25T profile are designed with a built-in cable channel to simplify the wiring process.
